

SEED ROUND

AgriCycle

The exchange layer for farm biomass.

Turning crop residue into a tradable commodity — for farmers, industries, and cleaner air.

Raising \$1,000,000 seed · 18-month runway · India first

Confidential · 2026 · github.com/klu2300032719/AgriCycle

Every season, farm waste goes up in smoke

350–500 Mt / year

Agricultural residue generated in India — much of it burned or dumped.

Broken market

Farmers lack buyers; mills can't source quality feedstock from fragmented farms.

Opaque brokers

Cash deals, no moisture grades, no price discovery, no logistics transparency.

Air & climate cost

Stubble burning drives smog crises and wastes energy industry is mandated to use.

AgriCycle: the farm biomass exchange

Farmers list residue. AI guides fair prices. Industries buy graded feedstock. Logistics and escrow close the deal.

01 List

Estimate volume & grade
waste in minutes

02 Price

AI + market signals suggest
fair ■ bands

03 Match

Nearby mills by waste type &
distance

04 Deal

Offers → accept → escrow
→ transport

05 Settle

Payments, CO■ avoided,
analytics

Built. Demoable. Extensible.

Live marketplace

Filter listings by type, grade, location

AI price prediction

Groq LLM + regression fallback

Sell & grade

Volume estimate + A/B/C scoring

Offer pipeline

Send → accept → demo escrow → complete

Transport booking

Vehicle, distance, cost, shipment IDs

Buyer matching

Geo-aware industrial demand scoring

Auth & roles

Farmer / buyer / transporter / admin

Analytics dashboard

Earnings, escrow, payments, mix

Massive commodity. Missing digital plumbing.

\$2.5–3.5B

India biomass market (2024 est.)

350–500 Mt

Agri residue generated yearly

\$1B+

Illustrative GMV if 50 Mt @ ~\$2k/t

3–8%

Target platform take rate on GMV

We do not need all of India. Owning dense corridors (paddy, sugar, coconut, manure) at high share — plus logistics and finance layers — compounds to a category-defining company.

TAM: global agri-biomass & circular feedstock · **SAM:** India solid biomass trade & logistics · **SOM:** 2–3 state corridors in 36 months

Policy, climate, and industry demand converge

1. Anti-burning pressure

NCR smog politics force alternatives to open burning of paddy straw.

2. Bioenergy mandates

SATAT, co-firing, and renewable targets create industrial offtake for residue.

3. ESG procurement

Corporates need auditable supply chains and CO₂ diversion metrics.

4. Digital rails ready

UPI, smartphones, and WhatsApp ops make rural marketplaces viable.

Multiple revenue layers on one GMV flywheel

Marketplace fee · Near-term

2–5% of GMV on closed deals

Buyer subscriptions · Near-term

Verified procurement seats for mills

Logistics margin · Year 1–2

Transport & collection markup

Financing spread · Year 2+

Advances / invoice discounting (partners)

Carbon & ESG · Year 2+

Diversion certificates & reporting

Data / SaaS · Year 3+

Price index & procurement tools

Density first. WhatsApp-native. One offtake at a time.

Phase 1 — Beachhead

1–2 crop corridors (e.g. South India sugar + rice). 5–15 industrial buyers with weekly offtake. Field agents + WhatsApp onboarding.

Phase 2 — Liquidity

Repeat GMV, baling partners, transport SLAs, escrow. Target 500+ active sellers and measurable residue diverted.

Phase 3 — Expand

Replicate to North residue belts. Financing partner. Buyer procurement SaaS. Series A narrative.

Why AgriCycle wins the residue niche

Capability	Brokers	Classifieds	AgriCycle
Moisture & grade	No	No	Yes
Industrial offtake focus	Ad hoc	No	Yes
Bulk logistics	Cash + call	Rare	Built-in
AI price guidance	No	No	Yes
Escrow / tracking	No	Rare	Yes
Carbon narrative	No	No	Yes

Working product — ready for pilot deployment

What exists today

- Full-stack Next.js marketplace in production-ready repo
- Neon Postgres + Better Auth + Groq AI integrated
- Offer → escrow (demo) → settlement workflow
- Admin console, roles, password reset, legal pages
- Open source: github.com/klu2300032719/AgriCycle

Honest positioning

- Honest stage: pre-revenue software MVP
- Seed data + demo flows for walkthroughs
- Next 90 days: 1 pilot district + mill LOIs
- Target: first paid offtake within 6 months
- No fake farmer counts — traction will be real GMV

From demo to density to default channel

0–6 mo

- Launch pilot cluster
- Field ops hire
- First LOIs
- WhatsApp layer

6–12 mo

- ■ 1–3 Cr GMV goal*
- UPI / escrow live
- Logistics partners
- Repeat buyers

12–18 mo

- 2nd state
- Financing pilot
- Carbon pilots
- Series A ready

**Internal planning targets — not guarantees of performance.*

THE ASK

Raising \$1,000,000 seed

18-month runway to prove density, GMV, and unit economics after truck cost.

40%	Product & engineering Payments, mobile/PWA, KYC, ops tools
30%	Go-to-market & field Cluster ops, buyer sales, farmer onboarding
15%	Logistics & WC buffer Collection pilots, float for early deals
15%	G&A; / legal / contingency Entity, compliance, runway cushion

Founders at agri + climate + software intersection

Insert founder bios before sending

Add 2–3 founders/advisors with proof in: agri operations, B2B sales to mills, full-stack product, and climate policy. Investors fund teams that can execute density in the field — not only ship UI.

Hiring with seed: Head of Field Ops · Full-stack engineer · B2B offtake lead · Part-time finance/legal

AgriCycle is raising \$1M seed to prove local density, close real offtake, and become the default exchange for agricultural biomass.
